Short Description

Clean Factory has released the Rolex Explorer M116509-0072 replica watch. The replica watch has a gray dial and is equipped with a customized 4130 movement. It has excellent texture and a very glossy feel. It is a high-quality replica watch.

Description

Time flies, but it never stops. We will wait patiently for you and wait for your appreciation. We recommend this Rolex Daytona M116509-0072 replica watch released by the factory. This watch has a gray dial and a metal strap. It is a colder style. Friends who like cold style can pay more attention to it. Against the backdrop of the gray dial, the panda eyes also look deeper. It seems that a gentleman in a gray suit is standing in front of him.

This watch has an impeccable enamel black dial with zero color difference. Each part of the carefully assembled three-layer dial is electroplated. The bezel is precisely matched with black oil injection, presenting a matte effect consistent with the original.

The joint between the glass and the case is completely transparent, with no visible white edges. The curvature of the glass edge is consistent with the original, and the height of

the ceramic ring protruding from the glass is also the same as the original. The ceramic ring is more three-dimensional and rounded, the font is clean and neat, and the edge of the ceramic ring is slightly rounded.

The luminous filling height is moderate, the brightness is good, the font printing has a strong three-dimensional sense, and the size of the small black circle is consistent with the original.

The strap/case fits seamlessly. The top of the strap/case is flush with the case, and the tail is slightly concave. The bottom of the strap/case is concave with the watch head, which is consistent with the original.

The watch is equipped with a newly customized Rolex-exclusive Cal. 4130 automatic winding movement, and the thickness is consistent with the original. All functions are 100% realized and equipped with an unprecedented customized KIF shock absorber. The entire assembly process follows the design of the original Cal.4130 movement, and the three splints from chamfering to sun patterning are perfectly echoed with the original, maintaining 1:1 respect for the original design. This not only surpasses all Daytona series imitations on the market but is also the only replica that can compete with the original.

Clean Factory's replica Rolex Daytona watch is made of 904L material, equipped with 4130 movement, an AR strap, a pure dial/one-of-a-kind edition, a pure ceramic bezel, and polished original hands, with a thickness of 12.2-12.3 inches.

Specification
