Short Description

Come and take a look at this Rolex Cosmograph Daytona 116519-0104 Customized Drill Ring replica by the famous Clean Factory. This is a specially customized luxury sports chronograph watch, which has attracted much attention for its unique diamond-encrusted bezel and high-simulation design. Those who like sports style should not miss it; follow my introduction to get to know this replica watch.

Description

Rolex Cosmograph Daytona 116519-0104 is designed for friends who prefer sports style. The classic appearance is matched with a dark gray dial, a dark gray rubber strap, and the sub-dial pointer is specially matched with red. A hint of heat in the deepness immediately makes the whole dial lively and unique. This strong color difference is not used in a large area, and there will be no strong visual impact, which makes people uncomfortable. Just a touch of a red pointer can make people notice it at a glance, and they will linger wherever they look. Another special thing is that the outer part of the dial is also inlaid with a circle of diamonds, which is also different from the ordinary dial.

The impeccable black enamel dial has zero color difference, and each part of the carefully

assembled three-layer dial is electroplated. The bezel is filled with precisely matched black grease, presenting a matte effect exactly the same as the original.

The watch is equipped with a new Cal.4130 automatic winding movement exclusively customized by Rolex, and the thickness is consistent with the original. Each function is 100% realized, equipped with an unprecedented custom KIF shock absorber. The entire assembly is designed with the original Cal. 4130 movement, and all three plywoods are impeccably consistent with the original from chamfers to sunray patterns, respecting the original design at a 1:1 ratio. This not only surpasses all replicas of the Daytona series on the market but is also the only replica that can match the original.

Features of the replica

High Simulation: Clean Factory replica watches are highly simulated in materials, details, and craftsmanship to ensure similarity to the original.

High-quality materials and craftsmanship: Using high-quality materials such as 18K white gold, ceramics, and high-quality diamonds, hand-set diamonds, and meticulous craftsmanship, the look and feel are very close to the original.

Customized design: The customized diamond-set bezel adds a unique sense of luxury and personalized elements, distinguishing it from the standard version.

Precision movement: The replica Rolex Caliber 4130 movement is close to the original in appearance and function, providing reliable timing performance.

Comfort: The black Oysterflex rubber strap ensures comfortable wearing, durability, and style.

Unprecedented use of custom KIF shock absorbers, known for their high-end positioning. Usually, due to cost constraints, the development of replica movements avoids the use of such shock absorbers, but C Factory spared no effort to ensure the use of such shock absorbers. The entire movement is based on the authentic Cal. The entire movement is based on the authentic movement 4130 and follows the authentic design. From chamfers to sun patterns, all three layers respect the original design in a perfect 1:1 ratio.

Clean Factory's Rolex Daytona replica watch uses 904L material, 4130 movement, an AR strap, a clean dial/unique version, a clean ceramic ring, and polished factory hands, with a thickness of 12.2-12.3.

The seam between the glass and the case is completely transparent, with no obvious white edges. The curvature of the glass edge is the same as the original, and the height of the

ceramic ring protruding from the glass is the same as the original. The ceramic ring is more three-dimensional and rounded, the font is simple, and the edge of the ceramic ring is slightly rounded.

The luminous filling is moderately high, the brightness is good, the font is printed three-dimensionally, and the size of the small black circle is consistent with the original.

The strap or case is seamless. The top of the strap or case is flush with the case, and the tail is slightly dented. The bottom of the strap or case is concave with the watch head, which is consistent with the original.

Specification

Features	
Brand	Rolex
Model	Cosmograph Daytona
Serial Number	116519-0104
Gender	Man
Movement Type	Automatic Movement
