Price: ~~\$1,099.00~~ \$789.00

Short Description

Hello! This classic replica watch, the Rolex Cosmograph Daytona 116519-0104, is a replica from Clean Factory. It features a dark gray dial and is a highly realistic chronograph. It perfectly recreates the details and quality of a classic Rolex design. This watch is beloved for its striking dark gray dial and exquisite craftsmanship.

Description

This episode features the Rolex Daytona 116519-0104, one of the best replica watches from our Clean Factory collection. Its striking dark gray dial is instantly appealing. Paired with a dark gray rubber strap, it boasts enduring appeal, a hallmark of its timeless appeal. It's not just vibrant colors that captivate; some prefer bold, others subdued, and there are certainly those who embrace the uniquely cool style of our protagonist.

This watch is unprecedented in its use of custom KIF shock absorbers, renowned for their high-end status. While these shock absorbers are typically avoided in replica movement development due to cost constraints, C Factory spared no expense in ensuring their inclusion. The entire movement is based on the authentic caliber 4130, adhering to the

original design. From the chamfers to the sunray finish, all three layers are perfectly 1:1, faithfully faithful to the original design.

The impeccable black enamel dial features zero color deviation, meticulously assembled on three levels, each component galvanically finished. The bezel is filled with a precisely matched black grease, creating a matte finish identical to the original.

This watch is equipped with the new, custom-made Caliber 4130 automatic movement, identical in thickness to the original. Every function is 100% authentic, and it features custom-made KIF shock absorbers. The entire assembly is designed to mirror the original Caliber 4130, with all three bridges, from the chamfers to the sunray pattern, immaculately authentic, adhering to the original design with a 1:1 ratio. This not only surpasses all Daytona replicas on the market but is also the only replica truly comparable to the original.

Clean Factory's replica The Rolex Daytona features 904L material, a 4130 movement, an AR strap, a clean dial/unique edition, a simple ceramic bezel, and polished factory hands. The watch measures 12.2-12.3 mm thick.

The seam between the glass and the case is completely transparent, with no noticeable white edge. The curvature of the glass edge remains the same as the original, and the height of the ceramic bezel protruding from the glass remains the same. The bezel is more three-dimensional and rounded, with simple fonts and a slightly rounded edge.

High Simulation: Clean Factory meticulously replicates materials, craftsmanship, and details to ensure the replica looks and feels close to the original.

Premium Materials and Craftsmanship: The use of 18K white gold, Cerachrom ceramic, and a high-quality rubber strap gives the replica watch an exceptionally luxurious feel.

Customized Details: The dark gray dial with black subdials creates a unique visual effect, perfect for those seeking personalization. Precision Movement: This replica Rolex Caliber 4130 movement maintains a similar appearance and timing functions to the original, ensuring the watch's accurate timing and durability.

Comfort: The high-performance rubber strap and Oysterlock folding safety clasp ensure a comfortable fit while offering a stylish and sporty style.

Specification

Features
