Short Description

This time we recommend the Rolex Daytona M116508-0001 replica watch released by Clean Factory. The replica watch is available with a white dial and is equipped with a customized 4130 movement. It is exquisite, beautiful, and unique.

Description

Let's take a closer look at this replica Rolex Daytona M116508-0001 watch created by Clean Factory. This watch has a white dial and a gold metal strap. The outer ring of the dial and the small disc are also gold. Compared with the all-gold watch, the white dial weakens the strong feeling brought by the gold, but it shows a bit of elegance. Beyond the hustle and bustle, there is tranquility in the heart. Special beauty brings specialness to you.

Continue to explore Clean Factory's top replica watch—the Rolex Daytona series. This watch has an impeccable enamel black dial with zero color difference. Each part of the carefully assembled three-layer dial is electroplated. The bezel is precisely matched with black oil injection, presenting a matte effect consistent with the original.

The seam between the glass and the case is completely transparent, with no visible white

edges. The curvature of the glass edge is consistent with the original, and the height of the ceramic ring protruding from the glass is also the same as the original. The ceramic ring is round and has a stronger three-dimensional sense, the font is clean and neat, and the edge of the ceramic ring is slightly rounded.

The luminous filling height is moderate, the brightness is good, the font printing has a strong three-dimensional sense, and the size of the small black circle is consistent with the original.

The strap/case fits seamlessly. The top of the strap/case is flush with the case, and the tail is slightly concave. The bottom of the strap/case is concave with the watch head, which is consistent with the original.

The watch is equipped with a newly customized Rolex-exclusive Cal. 4130 automatic winding movement, and the thickness is consistent with the original. All functions are 100% realized and equipped with an unprecedented customized KIF shock absorber. The entire assembly process follows the design of the original Cal.4130 movement, and the three splints from chamfering to sun patterning are perfectly echoed with the original, maintaining 1:1 respect for the original design. This not only surpasses all Daytona series imitations on the market but is also the only replica that can compete with the original.

Clean Factory's replica Rolex Daytona watch is made of 904L material, equipped with 4130 movement, an AR strap, a pure dial/one-of-a-kind edition, a pure ceramic bezel, and polished original hands, with a thickness of 12.2-12.3 inches.

Specification

Features
