Short Description

The focus is on the Rolex Daytona M126518LN-0012 replica watch released by Clean Factory. The replica watch is available with a gold dial and is equipped with a customized 4131 movement. It is exquisite and gorgeous, with an outstanding temperament.

Description

Let's continue to explore the replica Rolex Daytona M126518LN-0012 4131 watch launched by the factory. The dial color of the watch is gold, with a dark gray rubber strap. The classic watch, with gold, adds to the exquisite texture of the appearance. The quality created by first-class craftsmanship always brings you a super comfortable wearing experience. Immersed in the world of creating high-end replica watches, we are committed to continuing to maintain a high standard of professional attitude and present fine products.

This exquisite watch adopts a three-layer dial design. The black enamel dial is precisely electroplated to show a high-quality luster. Compared with the original, the ceramic bezel is precisely matched and has a matte effect.

The watch is equipped with a customized Rolex-exclusive Cal. 4131 automatic mechanical movement. The thickness is exactly the same as the original, and the functions are 100% restored. The movement is equipped with a customized KIF shockproof device, making this replica watch a unique choice that surpasses other replica versions on the market and is comparable to the original.

Clean Factory demonstrates its commitment to premium positioning with its award-winning custom KIF shockproof device. While cost constraints often prevent replica movements from using such shockproof devices, Clean Factory spared no effort to ensure that they are integrated. From the bevels to the sunray pattern, the entire movement is perfectly faithful to the original design in a 1:1 ratio.

The details of the Rolex Daytona replica watch made by VS Factory are exquisite. The mirror and the case are integrated without visible white edges. The curvature of the mirror is consistent with the original, and the ceramic bezel is extremely convex. The bezel has a more rounded and three-dimensional appearance, with clear fonts and slightly rounded edges.

The luminous fill is extremely bright, the font printing is very three-dimensional, and the small black second hand is the same size as the original.

The watch or case fits perfectly, with the top flush with the case and the bottom slightly concave. The bottom of the strap or case cover is concave, consistent with the original.

The Clean Factory replica Rolex Daytona showcases exquisite craftsmanship, with 904L stainless steel, calibre 4131, an AR bracelet, a clean dial/unique edition, a clean ceramic bezel, and polished original hands, approximately 12.2-12.3 mm thick.

Experience the exceptional detail and precision of this replica watch that perfectly captures the essence of the original Daytona collection.

Specification

Features
