Price: ~~\$799.00~~ \$569.00

Short Description

Let me introduce to you this Rolex Explorer II M226570-002 replica watch released by Clean Factory. This replica watch has a black dial and is also equipped with a customized 3285 movement. Black has a unique charm. Different from the purity of white, it highlights the self in the dark, just like the difference between day and night.

Description

Next, I will continue to introduce the new Rolex Explorer2 replica watch from Clean Factory 226570.

This dial is black, black, calm and calm. The cool temperament arises spontaneously, which makes people look sideways. It reveals an unusual self-demeanor and a different kind of charming feeling. The black model has a more eye-catching appearance and a calm style. Unlike the purity of white, black is more like a deep eye, quietly gazing at the eyes of time in this world, which is worth having.

This is a rare and unique replica watch, and its various details are reflected in the following:

The biggest highlight of this release is the 3285 movement, which is similar to the 126710 movement, but with key size adjustments and improvements.

In the luminous display, the hands and hour markers are filled with Chromalight luminous material, which has a long-lasting blue luminous effect, making it easy to read the time in a dark environment.

Hands and hour markers: Black-edged hands and hour markers accurately replicate the design and shape of the originals

GMT hand: Orange 24-hour GMT hand for reading a second time zone, convenient and aesthetic.

Introduction to the 3285 movement

The standout feature of the Clean Factory 226570 Explorer 2 is the 3285 movement:

Dial and collar font differences

There are significant differences between the 226570 and the older 216570 models, especially in terms of the dial and collar fonts:

Font evolution: The 226570 features an updated font that sets it apart from the 216570. The change in font style and weight is a subtle but important update that enhances the overall look and aligns with Rolex's latest design language.

Size and compatibility: Although similar to the 126710 movement, the 3285 movement in the 226570 is larger, ensuring a better fit and function within the case. This adjustment corrects a common problem in other market versions, where the calendar is not in the correct position due to mismatched sizes.

Movement Development: Developing a new size for the Explorer 2 was a major challenge. Since the Explorer 2 watch is not very common, the movement factory has been hesitant to make a movement specifically for this model. It took Clean Factory more than a year to convince the Dandong movement factory to independently develop this unique movement.

Movement, Case and Hand Updates

To improve the Clean Factory 226570 Explorer 2, we made several key changes:

Movement Changes: As mentioned earlier, the movement has been upgraded to 3285, which perfectly fits the 42mm case of the 226570. Custom replica movement, similar in appearance to the Rolex Caliber 3285 automatic movement

Provides a power reserve of approximately 70 hours

Achieved date display and 24-hour GMT function, making it worry-free to switch schedules when working outside or making short trips to other places.

Case and Hand Modifications: The case and hands have undergone subtle yet meaningful changes that enhance the overall beauty and functionality of the watch.

Bezel Font Thickness: The thickness of the bezel font has also been modified. While the 216570 had a thinner font, the 226570 fits in with modern styles, with the white dial version introduced in 2023 showcasing a thicker font.

The new Rolex Explorer2 replica has always been a unique model in the Rolex collection, appreciated by collectors for its unique design and functionality. However, a truly perfect replica version is hard to find - until the release of Clean Factory's 226570. This model corrects many inaccuracies found in previous versions, especially the custom-developed 3285 movement.

Specification

Features	
Brand	Rolex
Model	Explorer
