Short Description

Thanks for your attention. Let's take a look at this Rolex Daytona 116589 replica watch released by Clean Factory. The replica watch has a garnet red dial and is equipped with a customized 4130 movement. This watch has a gorgeous appearance and unlimited charm. It is the best choice for energetic friends.

Description

Welcome to continue to pay attention to the Rolex Daytona 116589 replica watch produced by the Clean Factory. The color of this replica watch is bright pomegranate red, which is warm and unrestrained. With a metal strap, the dial pointer is black, and the visual difference with the pomegranate color is strong, which produces a strong sense of beauty. This is a bright and moving beauty that makes people look at it sideways. I believe that the eyes of friends will not miss it.

The impeccable black enamel dial has zero color difference, and each part of the carefully assembled three-layer dial is electroplated. The bezel is filled with precisely matched black grease, presenting a matte effect exactly the same as the original.

The strap or case of this replica watch is seamless. The top of the strap or case is flush with the case, and the tail is slightly concave. The bottom of the strap or case is concave with the head, which is consistent with the original.

Unprecedented use of customized KIF shock absorbers, which are known for their high-end positioning. Normally, due to cost constraints, the development of replica movements would avoid using such shock absorbers, but C Factory spared no expense to ensure the use of such shock absorbers. The entire movement is based on the authentic Cal. The entire movement is based on the authentic movement 4130 and follows the design of the authentic one; from the chamfers to the sun pattern, all three layers respect the original design in a perfect 1:1 ratio.

Clean Factory's Rolex Daytona replica watch uses 904L material, 4130 movement, an AR strap, a simple dial/unique version, a simple ceramic ring, and polished factory hands, with a thickness of 12.2-12.3.

The seam between the glass and the case is completely transparent, with no obvious white edges. The curvature of the glass edge is the same as the original, and the height of the ceramic ring protruding from the glass is the same as the original. The ceramic ring is more three-dimensional and rounded, the font is simple, and the edge of the ceramic ring is slightly rounded.

The luminous filling is of moderate height and good brightness, the font is printed three-dimensionally, and the size of the small black circle is consistent with the original.

Specification

Features
