The replica watch has a rose gold dial to choose from and is equipped with a customized 4130 movement. Its exquisite appearance and reliable quality will satisfy you.

Description

Let's continue to explore the Rolex Daytona M116515LN-0018 replica watch carefully produced by Clean Factory. The dial of the replica watch is rose gold, with a dark gray rubber strap. A noble watch with impeccable workmanship. Whether it is the color matching or the dial design, the design of the scale shows a full sense of detail. This is the strength of the big factory.

Let's pay attention to more details:

The strap or case is seamless. The top of the strap or case is flush with the case, and the tail is slightly dented. The bottom of the strap or case is concave with the head, which is consistent with the original.

Clean Factory's new internal memory steel sheet and fluororubber strap

The impeccable black enamel dial has zero color difference, and each part of the carefully assembled three-layer dial is electroplated. The bezel is filled with precisely matched black grease, presenting a matte effect exactly the same as the original.

The watch is equipped with a new Cal.4130 automatic movement customized by Rolex, and its thickness is consistent with the original. Each function is 100% realized, and it is equipped with an unprecedented customized KIF shock absorber. The design of the entire assembly is consistent with the original Cal. 4130 movement, and all three splints are impeccably consistent with the original, from chamfers to sunray patterns, respecting the original design at a 1:1 ratio. This not only surpasses all replicas of the Daytona series on the market but is also the only replica that can match the original.

The customized KIF shock absorber, which is known for its high-end positioning, is used unprecedentedly. Usually, due to cost constraints, the development of replica movements will avoid the use of such shock absorbers, but C Factory spared no effort to ensure the use of such shock absorbers. The entire movement is based on the authentic Cal. The entire movement is based on the authentic movement 4130, and the design of the authentic one is followed. From chamfers to sun patterns, all three layers respect the original design with a perfect 1:1 ratio.

The Rolex Daytona replica watch from Clean Factory uses 904L material, 4130 movement, an AR strap, a simple dial/unique version, a simple ceramic ring, and polished factory hands, with a thickness of 12.2-12.3.

The seam between the glass and the case is completely transparent, with no obvious white edges. The curvature of the glass edge is the same as the original, and the height of the ceramic ring protruding from the glass is the same as the original. The ceramic ring is more three-dimensional and rounded, the font is simple, and the edge of the ceramic ring is slightly rounded.

The luminous filling is moderately high, the brightness is good, the font is printed three-dimensionally, and the size of the small black circle is consistent with the authentic one.

Specification

Features

Brand	Rolex
Model	Daytona
Serial Number	M116515LN-0018
Gender	Man
Movement Type	Automatic Movement
Movement Model	Cal.4130 Automatic Movement
