Short Description

This is a Rolex Daytona M116505-0009 replica watch released by Clean Factory. The replica watch is available with a rose gold dial and is equipped with a customized 4130 movement. It has exquisite workmanship and unparalleled quality. It perfectly replicates the classic and allows you to feel the classic atmosphere.

Description

I am very happy to introduce this Rolex Daytona M116505-0009 rose gold replica watch launched by Clean Factory. The dial color of this watch is rose gold, and the three sub-dials are black. It is matched with a metal strap of the same color. The whole watch is gorgeous and shining. The atmospheric appearance brings you a sense of satisfaction, a happier mood, more confident people, and things around you may become more handy. This is its magic. Here are more detailed details:

Clean Factory's Rolex Daytona replica watch is made of 904L material, 4130 movement, AR strap, simple dial/unique version, simple ceramic ring, and polished factory hands, with a thickness of 12.2-12.3.

The seam between the glass and the case is completely transparent, with no obvious white

edges. The curvature of the glass edge is the same as the original, and the height of the ceramic ring protruding from the glass is the same as the original. The ceramic ring is more three-dimensional and rounded, the font is simple, and the edge of the ceramic ring is slightly arced.

The luminous filling is of moderate height, with good brightness; the font is printed three-dimensionally, and the size of the small black circle is consistent with the original.

The impeccable black enamel dial has zero color difference, and each part of the carefully assembled three-layer dial is electroplated. The bezel is filled with precisely matched black grease, presenting a matte effect exactly the same as the original.

The watch is equipped with a new Cal.4130 automatic winding movement exclusively customized by Rolex, and the thickness is consistent with the original. Each function is 100% realized and equipped with an unprecedented customized KIF shock absorber. The entire assembly is designed with the original Cal. 4130 movement, and all three splints are impeccably consistent with the original, from chamfers to sunray patterns, respecting the original design at a 1:1 ratio. This not only surpasses all replicas of the Daytona series on the market but is also the only replica that can match the original.

Unprecedented use of customized KIF shock absorbers, which are known for their high-end positioning. Normally, due to cost constraints, the development of replica movements would avoid the use of such shock absorbers, but C Factory spared no expense to ensure the use of such shock absorbers. The entire movement is based on the authentic Cal. The entire movement is based on the authentic Cal. 4130 and follows the authentic design, from the chamfers to the sunrays; all three layers respect the original design in a perfect 1:1 ratio.

Specification

Features	
Brand	Rolex
Model	Daytona
