Price: ~~\$5,060.00~~ \$3,370.00

Short Description

We would like to specially introduce the Rolex Daytona 116588 replica watch released by Clean Factory. The replica watch is available with a gold dial, equipped with a customized 4130 movement, a rubber strap, and a personalized tiger-faced dial. It is unique and unforgettable.

Description

I recommend the Rolex Cosmograph Daytona 116588 TBR replica watch customized and modified by the cleaning factory. This watch is specially designed with a full diamond tiger face dial, which is exquisite and noble. The three sub-dials in the dial are perfectly arranged with the tiger face, just like the tiger's eyes looking directly at you, vivid and interesting. The dial is inlaid with diamonds, which adds a noble atmosphere. This watch has a gold dial and a dark gray rubber strap. This replica watch is one of the few specially designed models, a high-end series, and people who like this style will fall in love with it at first sight. The following is a detailed introduction to the details of the watch:

First of all, it has an impeccable enamel black dial with zero color difference, and each

part of the carefully assembled three-layer dial is electroplated. The bezel is filled with precisely matched black oil to present the same matte effect as the original.

And the watch is powered by a new customized Rolex-exclusive Cal.4130 automatic winding movement, reflecting the thickness of the original. Each function is 100% realized, with an unprecedented custom KIF shock absorber. The entire assembly follows the design of the genuine Cal.4130 movement, and all three plates perfectly reflect the original from the chamfer to the sunburst pattern, maintaining 1:1 respect for the original design. This not only surpasses all replicas of the Daytona series on the market but is also the only replica that can be compared with the original.

This Clean Factory replica Rolex Daytona watch uses 904L material, 4130 movement, an AR strap, a clean dial/unique version, a clean ceramic ring, and polished original hands, with a thickness of 12.2-12.3.

The seam between the glass and the case is completely transparent, and no white edge can be seen. The curvature of the glass edge is consistent with the original, the height of the ceramic ring protruding from the glass is consistent with the original, the ceramic ring has a stronger sense of roundness, the font is clean, and the edge of the ceramic ring is slightly rounded.

The luminous filling height is moderate, and the brightness is good. The font printing is three-dimensional, and the size of the small black circle is consistent with the original.

The strap or case fits seamlessly, the top of the strap/case is flush with the case, and the tail is slightly concave. The bottom of the strap or case is concave with the watch head, which is consistent with the original.

Clean Factory's new built-in steel sheet and fluororubber strap

Unprecedented use of customized KIF shock absorbers, which are famous for their high-end positioning. Due to cost constraints, the development of replica movements usually avoids the use of such shock absorbers, but Factory C spared no expense to ensure the use of such shock absorbers. The entire movement is modeled after the original Cal.4130, following the original design; from chamfers to sunray patterns, all three layers respect the original design, with a perfect 1:1 ratio.

Specification

Features	
Brand	Rolex
