Short Description

Pay attention to the fine products and give yourself surprises. Let's take a look at the Rolex Daytona M116518LN-0046 replica watch released by the factory. The replica watch has a black dial to choose from and is equipped with a customized 4130 movement. It is a fine replica watch made with strength. It has good looks and quality, so you can buy it with confidence.

Description

Let me introduce you to this factory-cleared replica Rolex Daytona M116518LN-0046 watch. The dial color is black, with a dark gray rubber strap and a gold-colored design. A very cool watch with amazing gloss. Exquisite workmanship—every detail is carefully polished and made meticulously. It can instantly improve your temperament and make your aura different.

The watch is equipped with a new Cal.4130 automatic winding movement exclusively customized by Rolex, and the thickness is consistent with the original. Each function is 100% realized and equipped with an unprecedented custom KIF shock absorber. The entire assembly is designed with the original Cal. 4130 movement, and all three plywoods are impeccably consistent with the original, from chamfers to sunray patterns, respecting

the original design at a 1:1 ratio. This not only surpasses all Daytona replicas on the market but is also the only replica that can match the original.

The impeccable black enamel dial has zero color deviation, and each part of the carefully assembled three-layer dial is electroplated. The bezel is filled with precisely matched black grease, presenting a matte effect exactly the same as the original.

The seam between the glass and the case is completely transparent, with no obvious white edges. The curvature of the glass edge is the same as the original, and the height of the ceramic ring protruding from the glass is the same as the original. The ceramic ring is more three-dimensional and rounded, the font is simple, and the edge of the ceramic ring is slightly rounded.

Clean Factory's Rolex Daytona replica watch uses 904L material, 4130 movement, an AR strap, a simple dial/unique version, a simple ceramic ring, and polished factory hands, with a thickness of 12.2-12.3.

The luminous filler is of moderate height and good brightness, the font is printed three-dimensionally, and the size of the small black circle is consistent with the original.

The strap or case is seamless. The top of the strap or case is flush with the case, and the tail is slightly concave. The bottom of the strap or case is concave with the watch head, which is consistent with the original.

Clean Factory Brand New Internal Memory Steel Plate and Fluorine Rubber Strap

Specification

Features
